News Letter July 2011 Edition

News letters – so much to say - so little space.

Tackling the job of writing a news letter can be both fun and frustrating. The fun part is the collaboration of ideas that we put together that we would like to share with our partners in the industry. The frustrating part is the choosing from so many ideas competing with the minimal space of a news letter.

One thing we would like to do is to ask you, our readers on the ideas you would like us to focus on for future newsletters. It takes some time and resources to put them together and we might as well put it to good use. So give us some ideas.

Quality Control

All the equipment manufactured by Con-Serv Manufacturing is completely tested at the factory. System flow rates, electrical controls, leak testing, and operational functions are each tested in Conformance with the designed parameters. Customers have come to know Con-Serv Manufacturing equipment to be ruggedly built to last with minimal maintenance required. Many of Con-Serv manufacturing systems built 10 to 20 years ago are still in operation today.

In The News.

Space shuttle hosted water purification test

Israel's Fisher Institute for Air and Space Strategic Studies has begun a bio-medical experiment on the Space Shuttle of the U.S. National Aeronautics Space Administration (NASA). Fisher, used as a research arm of the Israel Air Force, was conducting the experiment with Israel's Strauss Water on the Space Shuttle Atlantis. "Their mission will be to test a new water purification technology under zero gravity in space," Fisher said. The experiment began on July 8 and included an Israeli research team headed by Eran Schenker. Organizers said the Space Shuttle was hosting water purification technology based on polymers that would remove bacteria and viruses. "The data accumulated from the research in space will also have implications for purifying water on earth, as it has direct bearing on the field of drinking water purification in its broader context," Fisher said. "This experiment may be of important for the space industry as well, which is looking to improve the quality of water provided to astronauts on long missions." The experiment was enabled by a contract between the Israelis and Nano Racks under the latter's space agreement with NASA. Israel has been said to expect a breakthrough in water purification technology. "Purifying water from bacteria and viruses is a critical process in water-scarce regions around the world, and it is therefore important to expand our knowledge in this field," Schenker said.

New Products

We sent out an earlier e-mail on the membrane cleaning kit. This kit has been designed to allow our customers an opportunity for an additional profit center. The kit comes complete with solution tank, 20 gpm Stainless Steel pump, Stainless steel connection hoses and startup chemicals. Give a call today, you may even talk Stan into the introductory pricing we had back in march. But it won't last long.

Maintenance Reminder:
Have you checked your Reverse Osmosis Pre-Filter recently?

Con-Serv Website.

www.con-servwater.com

We have been busy adding lots of new stuff to the website. Under the technical tab you will find our resource guide full of useful data like RO Troubleshooting, filtration spectrum, amp load chart and more.

Additionally you will find our product cut sheets and stub up drawings for our self cleaning filter line.

Under the products page we put together pages that describe the products, technology and other useful data pertaining to the equipment. We hope these areas are useful in providing one location for the information you use on a daily basis.

Please view the pages and let us know any other data you would like us to make available to you. This website has been designed for you. We need you to tell us what would make it the most resourceful site on the web. We look forward to your suggestions.

Jokes

A BLONDE WHO'S PREPARED:

A guy notices that his new blond girlfriend brings two glasses to bed each night, one empty and the other filled with water. "Why do you do that?" he asked.

She answered, "Well, if I wake up in the middle of the night, I don't know if I'm going to be thirsty or not."

CON-SERV Saving Our World's Water
WATER RECOVERY SYSTEMS

Standard are the Obvious Con-Serv Qualities:
User Friendly • Quality Construction • Performance • Low Cost to Operate • Inexpensive to Purchase

**CON-SERV'S NEW! MCK 3-11
REVERSE OSMOSIS MEMBRANE CLEANING KIT**

- SOLUTION HOLDING TANK
- STAINLESS STEEL ½ HP 20 GPM PUMP WITH ON/OFF CONTROL BOX
- STAINLESS STEEL CONNECTION HOSE
- CLEANING CHEMICAL
- 115 VOLT 10 AMP

Clean your RO Membranes and add years to the replacement time!

Connect feed line, return permeate and concentrate lines back into solution tank!

COMPLETE CLEANING KIT w/CLEANING CHEMICAL: ~~\$1,168.44~~

\$876.³³ **Introductory Offer - LIMITED TIME ONLY!**

WATER FOR THE KING

The King of a primitive but strategically-important third world nation visits the U.S. for the first time. As the King was being wined and dined by US officials in a four-star restaurant, his thirst was huge but he was distrustful of the water he was being served by the over-gratuitous staff. He quietly instructed his servant to go and fetch him a glass of water. Time and again, the King motioned his servant to fetch more water, and he would scamper off and return with yet another glass. On the fifth trip, though, the servant returned empty-handed. "You wretched man, why have you returned without what I ask?" demanded the King. "I beg your forgiveness, O Illustrious One, stammered the servant. "When I returned to the well, the white man was sitting upon it!"
